ABOUT US

A legacy of experience since
1954

Alumeta Industries is a trusted non-ferrous scrap buying company specializing in aluminium and copper scrap. We work closely with authorized scrap yards, recyclers, and industrial generators to responsibly procure quality non-ferrous scrap through transparent and compliant processes. Built on integrity and strong partnerships, we support sustainable recycling while delivering consistent value across the supply chain.

VISION

To responsibly procure aluminium and copper scrap through ethical trading practices, transparent pricing, and compliant operations, while building long-term partnerships with suppliers and supporting sustainable recycling.

MISSION

To be recognised as a leading aluminium and copper scrap buyer in the United Kingdom, setting industry benchmarks in transparency, compliance, reliability, and sustainable sourcing.

WHY CHOOSE ALUMETA INDUSTRIES?

**Competitive
Prices**

**Eco-Friendly
Practices**

**Pan-UK
Collection**

**Transparent Grading
& Weighing**

BAILING AND TRANSPORTATION EFFICIENCY

After grading, aluminium and copper scrap is processed through advanced bailing machines. The scrap is compressed under high pressure into dense, uniform bales. This process:

- Reduces volume significantly
- Improves loading and unloading efficiency
- Minimizes transportation costs
- Ensures safer storage and handling
- Prevents material spillage and contamination

Our baling process supports eco-friendly logistics by optimizing container space and reducing carbon footprint during transportation.

WHAT WE BUY

ALUMINIUM SCRAP

Extrusion Scrap

Wire Scrap

Sheet Scrap

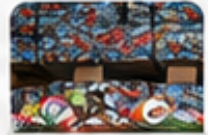

Alloy Wheel Scrap

Turning Scrap

Engine Scrap

Beverage Can Scrap

COPPER SCRAP

Wire Scrap

Sheet Scrap

Pipe Scrap

OUR PROCESS

SCRAP GRADING & QUALITY SEGREGATION

At ALUMETA INDUSTRIES, we follow a strict and systematic scrap grading process for aluminium and copper materials. Every batch of scrap we procure is carefully inspected, sorted, and categorized according to internationally accepted recycling standards.

SCRAP GRADING

Our grading process includes segregation based on:

- Metal type (aluminium, copper, mixed metals)
- Alloy composition
- Cleanliness and contamination level
- Physical form (wire, sheet, turning, extrusion, pipe, etc.)
- Purity and recyclability

QUALITY SEGREGATION

By separating scrap into precise grades, we ensure:

- Higher recovery value during recycling
- Reduced energy consumption in melting and refining
- Minimal material loss
- Improved furnace efficiency
- Environmentally responsible recycling practices
